

# MODULATION OF GENE EXPRESSION BY COMBINATION THERAPY

## ABSTRACT OF THE DISCLOSURE

The invention relates to the modulation of gene expression. In particular,  
5 the invention relates to compositions comprising antisense oligonucleotides which  
inhibit expression of a gene in operable association with protein effectors of a  
product of that gene, and methods of using the same.

In addition, the invention relates to the modulation of mammalian gene  
expression regulated by methylation.
